Profile

UX/UI designer with a BA in UX/UI Design, previously at Turm & Leufer, a Berlin-based design agency. Experienced in taking design work from research through to high-fidelity UI, with a strong focus on collaboration and delivering user-centred solutions.

Experience

UX/UI Designer — Turm & Leufer, Berlin | Aug 2025 – Aug 2026

Main project: Nordstern, an AI-powered content marketing SaaS platform. Designed the dashboard UI and onboarding experience as the only designer. Identified UX gaps after launch and redesigned key flows to reduce friction.

- Designed and iterated on client digital products end-to-end, from initial concepts in Figma through to Webflow implementation.
- Presented design work directly to a client, communicating design decisions and incorporating feedback into subsequent iterations.
- Created visual assets for social media and marketing campaigns, maintaining brand consistency across digital touchpoints.
- Collaborated within a senior-led team on client Webflow projects, contributing design ideas that were implemented into final deliverables.

Projects

Collab. - BA Thesis Project, University of Europe for Applied Sciences | 2026

- Designed a web platform connecting project owners with collaborators, addressing the discovery, trust, and social friction gaps that prevent people from finding the right team.
- Conducted user research through personas, empathy mapping, and competitive analysis across four platforms.
- Designed dual user journeys covering the full collaboration lifecycle, from project posting through to team completion and mutual endorsement.
- Ran a structured self-evaluation across a four-step project creation flow, identifying and resolving friction through label changes, interaction patterns, and helper text.

Education

- **Bachelor of Arts in UX/UI Design**

Minor: Digital Product Management
University of Europe for Applied Sciences
Graduated: August 2026

- **Bachelor of Fine Arts in Screen Acting**

Catalyst - Institute for Creative Arts and Technology
